

## 6.0 Landscape Design

### Public Realm - Entrance Green

The new entrance provides attractive green frontage onto Greenford Road and highlights the new approach to the Grove Farm Park.

The cafe creates a focal point and destination with a seating terrace for outdoor dining.

A serpentine path weaves through informal trees and generous lawns towards the park.

Key Plan

## 6.0 Landscape Design

### Public Realm - Green Link

The character is continued towards Grove Farm Park to create a green link. Mature trees are retained and incorporated into the design.

The green link becomes progressively more informal towards park with tree and shrub planting screening the existing car park to the west.

Outdoor exercise / play equipment is proposed within the Green Link to appeal to a wide range of ages including those over 12. It forms an activity trail leading to the proposed new play space within the park.

Green Link

Section 2

## 6.0 Landscape Design

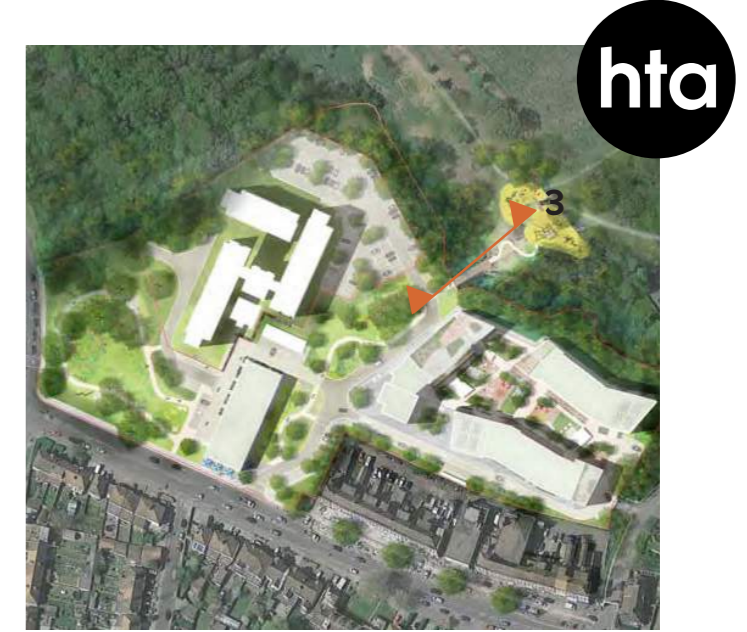

### Public Realm - Link to Grove Farm Park

A wooded embankment leads steeply down to a narrow stream forming the site boundary. On the Grove Farm side, the embankment rises again before levelling out.

A new bridge is proposed to connect the site to the park. Its exact alignment will be subject to discussion with Ealing Council at detailed design stage.

Realisation of this route will require the removal of a number of self-sown trees and the position of the bridge will be carefully selected to minimise impact on significant specimens. Selective thinning of trees however is beneficial to reduce over-shading of the bank and stream, enable establishment of a more biodiverse ground flora (currently dominated by ivy) and improve overlooking and sight lines.

Leading on from the bridge a new path will lead to the proposed play area. Again, its exact position design and configuration will be subject consultation with Ealing at the detailed design stage.
